

## What Does Science Look Like?

Four students are learning about guppies, and will share what they know with their class. They would like to find out everything they can about the guppy. Which student do you think will find out the most about guppies?

**Kathy:** “I already know a lot about guppies so I need to watch the guppy for a while and then draw a picture.”

**Misty:** “I need to make a prediction, watch the guppy, add another guppy, and make my prediction right.”

**Ann:** “I need to make a prediction, ask questions, watch it closely, write and draw what I see, and then share what I learned.”

**Jessica:** “I need to ask myself some really good questions, find answers to my questions, and then write them down. I then need to take some water out of the bowl and see what happens.”

Explain your answer:
