

Water Investigation

Nursery areas (egg, alevin, fry):	Yes	No
Are there places under the banks where young salmon could hide?		
Is the water cold and moving?		
Can you see any insects on the bottom of the stream, in the stream, or flying in the air?		
Spawning areas:		
Is the water clear? Can you see the bottom?		
Is there gravel (rocks the size of a pea) on the bottom of the stream?		
Is the water deep enough over the gravel that an adult salmon could swim there?		
Is the water cold and moving?		
Would the salmon be able to come up the stream to this place without running out of water, reaching a waterfall they can't jump over, or encountering lots of garbage?		

Notes and Observations:
